Jonathan Yeung

GAMES

- 1)Income and Expenditure
- 2)Credit and Interest
- 3)Chief Executive Election
- 4)Trade between Goods
- 5)Healthy Life
- 6)Stockery

INCOME & EXPENDITURE

What we've learnt:

From this game, we learnt that we should always be careful with how we use our money and how to collect items for the most points. We also learnt that we can save our money in the bank to gain Interest from the bank.

CREDIT & INTEREST

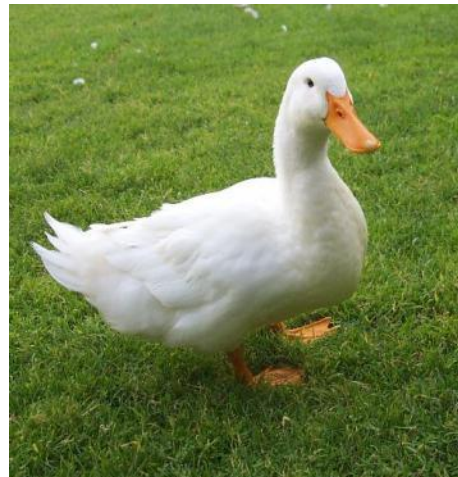

What we have learnt:
From this game, we found that we should think twice before you borrow an amount of money from the bank. When you do not have enough ability to return the amount of money, you should not borrow it.

TRADING BETWEEN GOODS

What we have learnt:

In ancient times, the people need to trade the goods they want. They did not have money, so they had to trade by other things such as cow, chicken or duck. It was very inconvenient for people to take such things. Therefore, money is invented.

HEALTHY LIFE

What have we learn?

From this game, we learn that health is important to us. A healthy life includes family, friendship, work and good hobbies.

If we want to win this game, we have to get a set of card in order to get bonus and have some good habits.

STOCKERY

What we've learnt?

From this game, we know more about stock. We can learn some terms that we don't know before such as privatization, allotment, right issue, dividend etc.

We can win this game with more money and stock. We can use those things in the future. This game is very meaningful.

MY FEELINGS(TERRY CHUI)

When I come to HKUST, I feel very scared because this is my first time to come to HKUST and I need to meet more friends. It is a very difficult job. Luckily, the groupmates are very nice and Venus who is our group leader is very kind.

I am very glad to join this program because I can meet so many friends who are from different places and schools. Also, I can gain more things that we cannot learn from the books and school. I feel extremely excited because I can play different meaningful games that we can't buy outside. If I have chance, I hope I can join this program next year.

MY FEELINGS (MICHAEL TANG)

I feel quite excited after joining this course because I can get much information about money and I can meet many new friends who are from different schools in this course . I hope I can join this kind of course again next year.

MY FEELINGS (HUGO YEUNG)

I think this course is actually quite appealing to me because this is the first time I've ever gone in lessons in which most of the time was planed for us to play games. I've had fun and learnt many up-to-date information about strategies with investing stocks and how to make a fortune worth of bucks and wealth. This course was worth it because these knowledge can come in extremely useful afterwards.

MY FEELINGS (JUSTIN CHAN)

I like this program very much because it is very interesting. Professor Chan designs a lot of games for us to play. My favorite game is “Stockery”. It is very funny!

I hope I can go I.T. course next year again!

MY FEELINGS (JONATHAN YEUNG)

I think this course is quite attractive to me because before I attend this course, I thought wealth management was a kind of boring. It is because I am not good in math and wealth management involving lots of calculations. However, we played the card games most of the time and listening to Professor Chan was just 10% to 15% of the time in the course. Pro. Chan's information is up-to-date and his games are extremely interesting. When I had finished a game, I eagerly wanted to play once again. At last, I need to thank our leader, Venus as she puts lots of time and passion on us.

Thank You
